AKOSA CHINAZAEKPERE THANKGOD

Artist & Frontend Developer

Frontend Development | UI/UX Design | Illustration & Animation

09162546061 | Portfolio | LinkedIn | Nigeria

Dear Hiring Manager,

I started as an artist. Painting portraits taught me to notice light, colour and the small details that make something feel finished, and when I found frontend development I realised the same instincts apply to every screen people use. Today I do both: I draw, and I build interfaces that look the way they were meant to.

During my frontend development internship at Crestware Solutions, I built and deployed responsive websites and learnt to take a design all the way to a live product. I built SIWES Atlas for the OPay Challenge 2026: a directory that connects Nigerian students with vetted SIWES placements, with separate student and company gateways, an interactive explorer and application tracking. I also built PiNazza, an ordering website for a pizza brand with a menu, cart and checkout.

Alongside my Computer Science and Education degree at Lagos State University, I keep painting in Clip Studio Paint and drawing by hand, and I design in Figma before I write code. I would welcome the chance to bring that mix of creativity and technical care to your team, learn from experienced developers and designers, and help build products people enjoy using.

Here's what I can bring to the role:

1. Responsive frontend development, from layout to deployment on GitHub, Vercel and Netlify.
2. UI/UX design in Figma, with an artist's eye for colour, composition and detail.
3. Illustration and animation that give products and brands their own visual voice.
4. Project management and clear communication that keep work organised and on time.

I look forward to discussing how my skills and experience can contribute to your team's success. Thank you for considering my application.

Sincerely,
Akosa Chinazaekpere ThankGod
